DOLBY DIGITAL / DTS (5.1) INPUT UPGRADE FOR B&O SYSTEM 7000!

Dolby Digital and DTS are what everyone is talking about, but you want your customers to remain loyal to their Pro Logic only AV 7000. MSB Technology offers a fully automatic 5.1 Input Upgrade for the system 7000. This upgrade provides access to all Dolby Digital / DTS surround sound movies and music. B&O corporate in Denmark reviewed our upgrade and found it to function satisfactorily. MSB has since further refined and customized the upgrade for the B&O 7000 system.

How does the 5.1 Input upgrade work? - The upgrade allows any 5.1 signal to come in via *the existing* PL-INPUT connector on the back. The 7000 will *automatically* switch on the 5.1 input any time a multi-channel audio signal is present. To activate the center and surround channels the 7000 must be put in the Pro Logic mode.

Source compatibility - Any analog multi-channel output source, with or without volume controls can be plugged directly into the upgraded 7000. This includes any Dolby Digital or DTS processors. Additionally, many of the new DVD players have a built in AC-3 processor and will plug directly into our upgrade through the adapter cables offered.

Special DIN to DB-25 Cable - MSB makes a custom Y cable for this upgrade which fully supports the PL-INPUT interface. It has B&O male and female DIN connectors at one end, and a DB-25 connector at the other end. The DB-25 connector is the industry standard 5.1 connection. Plug it directly into any Dolby Digital / DTS processor equipped with a DB-25 output. (Note: For sources with six RCA output connectors and not a DB-25, MSB offers a special DB-25 to six RCA adaptor cable. You'll be using the two cables together.)

Pricing - The dealer price is $420 and includes the custom DIN to DB25 cable and FEDEX return shipping with prepayment. The suggested retail price is $695.

Turn around - The upgrade averages 5 to 10 working days after receipt.
Warranty - One year for parts and workmanship.

Please feel free to call me with any questions .
